

REGIONAL SPECIALISED METEOROLOGICAL CENTRE -TROPICAL CYCLONES, NEW DELHI
SPECIAL TROPICAL WEATHER OUTLOOK

DEMS-RSMC SPECIAL TROPICAL CYCLONES NEW DELHI DATED 19.08.2026

SPECIAL TROPICAL WEATHER OUTLOOK FOR THE NORTH INDIAN OCEAN (THE BAY OF BENGAL AND THE ARABIAN SEA) VALID FOR THE NEXT 168 HOURS ISSUED AT 0300 UTC OF 19.08.2026 BASED ON 0000 UTC OF 19.08.2026.

Sub: Depression over north Jharkhand & adjoining southwest Bihar

Depression over Jharkhand moved west-northwestwards with a speed of 12kmph during past 6 hours and lay centred at 0000 UTC of today, the 19th August, 2026, over north Jharkhand & adjoining southwest Bihar, near latitude 24.2°N and longitude 84.6°E, about 60km east-northeast of Daltonganj (42587, Jharkhand), 70km south-southwest of Gaya (42591, Bihar), 80km west-northwest of Hazaribagh (42699, Jharkhand), 90 km north south-southeast of Dehri (42588, Bihar).

It is very likely to continue to move west-northwestwards across Jharkhand, north Chhattisgarh & southeast Uttar Pradesh and weaken into a well-marked low-pressure area during next 12 hours.

As per INSAT 3D(S), intense convective cloud mass lay to the west of system centre. Associated scattered to broken low and medium clouds with embedded intense to very intense convection lay over Southeast Uttar Pradesh, East Madhya Pradesh, North Chhattisgarh with minimum cloud top temperature as -70°C to -90°C. Scattered to broken low and medium clouds with embedded moderate to intense convection lay over Vidarbha, coastal Andhra Pradesh, Rayalaseema, North Odisha and Jharkhand.

The estimated central pressure is 998 hPa and associated maximum sustained wind speed is 20 kt gusting to 30 kt.

Ranchi (42701, Jharkhand) reported mean sea level pressure (MSLP) as 998.9 hPa, pressure change in past 24 hrs (P24) as -0.8 hPa and Maximum Sustained Wind Speed (MSW) as 200⁰/04 kt. Daltonganj (Jharkhand) reported MSLP as 999.8 hPa, P24 as -2.2 hPa with calm wind conditions. Ambikapur (42693, Madhya Pradesh) reported MSLP as 1002.8 hPa, P24 as -1.8 hPa with MSW as 270⁰/02 kt.

REMARKS:

Madden Julian Oscillation index is in phase 6 with amplitude more than 1. It is predicted to continue in same phase with a decreasing trend in amplitude during next 8-10 days. The guidance from NCICS model indicates westerly weak wind anomaly (3-5 mps) over eastern parts of India & adjoining Westcentral BoB and prevalence of Equatorial Rossby wave (ERW) over north BoB with easterly wind anomaly (3-5 mps) over to its North over Indo Gangetic Plains on 19th August. The low-level vorticity is around $80-90 \times 10^{-6} \text{ s}^{-1}$ over system area. Vertically, it is extending up to 200 hPa level. The low-level convergence has decreased and is around $10 \times 10^{-6} \text{ s}^{-1}$ over system area and is north-south oriented extending from Indo Gangetic Plains to Westcentral BoB. Upper-level divergence is around $10 \times 10^{-6} \text{ s}^{-1}$ over the system area. Vertical wind shear of horizontal wind is moderate (10-15 kt) over the system area and along the expected path. These favourable features are supporting the system to maintain its intensity over land.

Cloud distribution: (a) Isolated: <25%, Scattered:25-50%, Broken: 51-75%, Solid:>75%, Convection Intensity: (a) Weak: Cloud Top Temperature(CTT)>-25°C, (b) Moderate: CTT:-25°Cto-40°C, (c) Intense: CTT: -41°Cto -70°C and (d) Very Intense::Less than -70°C Probability of cyclogenesis (formation of depression) :NIL:0%, LOW:1-33%, MODERATE:34-66% and HIGH:67-100%

Various NWP models are indicating the system to move slowly west-northwestwards as a well marked low pressure area/ low pressure area across North Jharkhand and adjoining areas of south Bihar & southeast Uttar Pradesh during next 24 hours.

Based on the observations and guidance from various numerical models:

Confidence Level in estimation of current location and intensity: High

Confidence Level in prediction of forecast track: High

Confidence Level in prediction of forecast intensity: High

Considering all the above, depression over north Jharkhand & adjoining southwest Bihar is very likely to continue to move west-northwestwards across Jharkhand, north Chhattisgarh & southeast Uttar Pradesh and weaken into a well-marked low-pressure area during next 12 hours.

OBSERVED AND FORECAST TRACK OF DEPRESSION OVER NORTH JHARKHAND & ADJOINING SOUTHWEST BIHAR BASED ON 0000 UTC (0530 Hrs. IST) OF 19TH AUGUST 2026

DATE/TIME IN UTC

IST = UTC + 0530

L: LOW PRESSURE AREA

D: DEPRESSION (17-27 KT)

DD: DEEP DEPRESSION (28-33 KT)

CS: CYCLONIC STORM (34-47 KT)

SCS: SEVERE CYCLONIC STORM (48-63 KT)

VSCS: VERY SEVERE CYCLONIC STORM (64-89 KT)

ESCS: EXTREMELY SEVERE CYCLONIC STORM (90-119 KT)

SuCS: SUPER CYCLONIC STORM (≥ 120 KT)

- LESS THAN 34 KT
- 34-47 KT
- ≥ 48 KT
- OBSERVED TRACK
- FORECAST TRACK
- CONE OF UNCERTAINTY

Forecast distance (km) and direction of the centre from nearest 5 coastal stations

Forecast Date and Time	Lead Period (hrs)	Lat	Lon	Station 1	Station 2	Station 3	Station 4	Station 5
19.08.26/0000	0	24.2	84.6	DALTONGANJ (60, ENE)	GAYA (70, SSW)	Hazaribagh (80, WNW)	DEHRI (90, SSE)	RANCHI (120, NW)

Cloud distribution: (a) Isolated: <25%, Scattered: 25-50%, Broken: 51-75%, Solid: >75%, Convection Intensity: (a) Weak: Cloud Top Temperature (CTT) > -25°C, (b) Moderate: CTT: -25°C to -40°C, (c) Intense: CTT: -41°C to -70°C and (d) Very Intense: Less than -70°C Probability of cyclogenesis (formation of depression): NIL: 0%, LOW: 1-33%, MODERATE: 34-66% and HIGH: 67-100%
